Duration	2 mins 48 secs
Grade	**13.00** out of 15.00 (**86.67**%)

Question **1**

Correct

Mark 1.00 out of 1.00

Which of the following best describes the process of a linear search?

- a. Checking each element sequentially ✓
- b. Skipping every second element
- c. Dividing the list in half repeatedly
- d. Sorting the list before searching

Question **2**

Correct

Mark 1.00 out of 1.00

What is the key characteristic of binary search?

- a. It always starts from the beginning of the list
- b. It works on unsorted lists
- c. It can be applied only if the list is sorted ✓
- d. It compares elements sequentially

Question **3**

Correct

Mark 1.00 out of 1.00

In binary search, what happens if the middle element does not match the target element?

- a. The list is sorted
- b. The search stops
- c. The search continues from the beginning
- d. The search continues in the left or right sublist ✓

Question **4**

Incorrect

Mark 0.00 out of 1.00

What is the first step in binary search?

- a. Compare the target element with the middle element in the list
- b. Compare the target element with the first element in the list
- c. Sort the list ✗
- d. Divide the list into two equal parts

Question **5**

Correct

Mark 1.00 out of 1.00

Which of the following is a type of searching method?

- a. Linear search ✓
- b. Bubble search
- c. Quick search
- d. Merge search

Question **6**

Correct

Mark 1.00 out of 1.00

In linear search, if the target element is not found in the list, what is the result?

- a. The first element is returned
- b. The search is considered unsuccessful ✓
- c. An error is raised
- d. The last element is returned

Question **7**

Correct

Mark 1.00 out of 1.00

In the context of searching, what is a successful search?

- a. When the search algorithm finishes
- b. When the list contains duplicate elements
- c. When the list is sorted
- d. When the element is found in the list ✓

Question **8**

Correct

Mark 1.00 out of 1.00

Which of the following is a conventional searching technique?

- a. Linear search ✓
- b. Binary search
- c. Hashing
- d. Dynamic search

Question **9**

Correct

Mark 1.00 out of 1.00

Which of the following statements about linear search is true?

- a. Linear search can be applied to both sorted and unsorted lists. ✓
- b. Linear search divides the list into halves.
- c. Linear search requires the list to be sorted.
- d. Linear search is more efficient than binary search on large lists.

Question **10**

Incorrect

Mark 0.00 out of 1.00

Given an array arr = {45,77,89,90,94,99,100} and key = 99; what are the mid values(corresponding array elements) in the first and second levels of recursion?

- a. 89 and 94
- b. 90 and 94 ✗
- c. 90 and 99
- d. 89 and 99

Question **11**

Correct

Mark 1.00 out of 1.00

In which situation is linear search more efficient than binary search?

- a. When the list is large and sorted
- b. When the list is small and sorted
- c. When the list is small and unsorted ✓
- d. When the list is large and unsorted

Question **12**

Correct

Mark 1.00 out of 1.00

In which type of search is the list divided into smaller sublists during the search process?

a. Linear search
b. Hash search
c. Binary search ✓
d. Sequential search

Question **13**

Correct

Mark 1.00 out of 1.00

Which of the following scenarios is best suited for applying binary search?

a. When the list is sorted ✓
b. When the list is very small
c. When the list is unsorted
d. When the list contains duplicate elements

Question **14**

Correct

Mark 1.00 out of 1.00

Which of the following is a limitation of binary search?

a. It can only be applied to large lists
b. It requires the list to be sorted ✓
c. It is slower than linear search for small lists
d. It does not work with negative numbers

Question **15**

Correct

Mark 1.00 out of 1.00

During a linear search, what is the maximum number of comparisons needed to find an element in a list of size n?

a. n-1
b. n/2
c. log n
d. n ✓
